

# 3/ Recursion vs Induction.

Generalized induction

$$\exists C \geq 1 \quad P(c) \wedge P(c+1) \wedge \dots \wedge P(c+C-1) \quad \dots \text{C-basis}$$

$$\forall n: n \geq c, P(n) \rightarrow P(n+C)$$

$$\therefore \forall n \geq c, P(n): \underbrace{P(c+C)}_{\downarrow} \wedge \underbrace{P(c+C+1)}_{\downarrow} \wedge \dots \wedge \underbrace{P(c+2C-1)}_{\downarrow}$$

$$P(c+2C)$$

Stamp 5¢, 4¢  
 $12¢ \leq n$   
 $P(n)$

$P(n) \rightarrow P(n+1)$  (X)  
 $P(n) \rightarrow P(n+4)$   
 induction

## 4.3 Recursive Definition & structural Induction

Recursively defined function

$$f: \mathbb{N} \rightarrow S \text{ (any set } S) \longrightarrow \text{sequence}$$

$\mathbb{N}$  (sequence of numbers)

$V$  (Vocabulary: Seq. of symbols)

i) Define  $f(0)$  ~~or  $f(1)$~~  or  $f(c)$ ... initial point.

ii) Define  $f(n)$  in terms of  $f(n-1), f(n-2), \dots$  recurrence relation

정확성  
 $f(1)$

$$a^n = \underbrace{a \cdot a \cdot \dots \cdot a}_{n \text{ times}}$$

iterative def.

$$a^1 = a$$

$$a^2 = a \cdot a$$

$$a^3 = a \cdot a \cdot a$$

$$a^n = \underbrace{a \cdot a \cdot a \cdot \dots \cdot a}_n$$

recursive def.

$$\begin{cases} a^1 = a & (n=1) \text{ basis} \\ a^n = a^{n-1} \cdot a & (n \geq 2) \text{ recursion} \end{cases}$$

$$a^4 = \underbrace{a^3}_{r} \cdot \underbrace{a}_r = \underbrace{a^2}_{r} \cdot \underbrace{a}_{r} \cdot \underbrace{a}_r = \underbrace{a^1}_{r} \cdot \underbrace{a}_{r} \cdot \underbrace{a}_{r} \cdot \underbrace{a}_r = a \cdot a \cdot a \cdot a$$

$$\begin{cases} a^0 = 1 & (n=0) \\ a^n = a \cdot a^{n-1} & (n \geq 1) \end{cases}$$

$$a^2 = \underbrace{a}_{r} \cdot \underbrace{a^1}_{r} = \underbrace{a}_{r} \cdot \underbrace{a}_{r} \cdot \underbrace{a^0}_{r} = a \cdot a \cdot 1 = a \cdot a$$

Def fibonacci series.

$$f_0 = 0, f_1 = 1, f_2 = 1, f_3 = 2, f_4 = 3, f_5 = 5, f_6 = 8, \dots$$

$$f_n = f_{n-1} + f_{n-2}$$

$$f_n < 2^n$$

Recursively Defined Sets and Structures

$\Sigma^*$ :  $\Sigma$ : alphabet: set of symbols.

set of strings over  $\Sigma$ .

$$\Sigma = \{0, 1\}$$

— basis

i)  $\epsilon \in \Sigma^*$

ii)  $\forall w \in \Sigma^* \wedge \forall a \in \Sigma \rightarrow wa \in \Sigma^*$

— recur.

(ix)  $w \cdot \epsilon = \epsilon \cdot w = w$   
 $\forall w \in \Sigma^*$

$\epsilon$ : empty string  
 identity for concatenation

$$\Sigma^* = \{\epsilon, 0, 1, 00, 01, 10, 11, \dots\}$$

$$w \times \epsilon = \epsilon$$

$$a \times 0 = 01$$

$$wa = 0100$$

$$\epsilon \times \epsilon = \epsilon$$

$$0 \times 1 = 01$$

$$1 \times 0 = 10$$

$$\epsilon \times 0 = 0$$

$$0 \times 0 = 00$$

$$0 \times 1 = 01$$

$$0 \times 1 = 01$$

$$1 \times 0 = 10$$

$$1 \times 1 = 11$$

$$00 \times 0 = 000$$

$$00 \times 1 = 001$$

$$01 \times 0 = 010$$

$$01 \times 1 = 011$$

$$10 \times 0 = 100$$

$$10 \times 1 = 101$$

$$11 \times 0 = 110$$

$$11 \times 1 = 111$$

$$000 \times 0 = 0000$$

$$000 \times 1 = 0001$$

$$001 \times 0 = 0010$$

$$001 \times 1 = 0011$$

$$010 \times 0 = 0100$$

$$010 \times 1 = 0101$$

$$011 \times 0 = 0110$$

$$011 \times 1 = 0111$$

$$100 \times 0 = 1000$$

$$100 \times 1 = 1001$$

$$101 \times 0 = 1010$$

$$101 \times 1 = 1011$$

$$110 \times 0 = 1100$$

$$110 \times 1 = 1101$$

$$111 \times 0 = 1110$$

$$111 \times 1 = 1111$$

3) Another def. for  $\Sigma^*$  over  $\Sigma$

$$\Sigma^* = \bigcup_{i \in \mathbb{N}_0} \Sigma^i = \Sigma^0 \cup \Sigma^1 \cup \Sigma^2 \cup \Sigma^3 \cup \dots$$

where  $\Sigma^i$  is defined recursively as follows

$$\begin{cases} \Sigma^0 = \{\epsilon\} \\ \Sigma^i = \Sigma \cdot \Sigma^{i-1} \end{cases} \text{ where } A \cdot B = \{xy \mid x \in A, y \in B\}$$

$\rightarrow \Sigma^i = \underbrace{\Sigma \cdot \dots \cdot \Sigma}_{i \text{ times}}$

Ex)  $\Sigma = \{0, 1\}$   
 $\Sigma^0 = \{\epsilon\}$   $\Sigma^1 = \Sigma \cdot \Sigma^0 = \Sigma \cdot \{\epsilon\} = \Sigma = \{0, 1\}$ ,  $\Sigma^2 = \{00, 01, 10, 11\}$ ,  $\Sigma^3 = \{000, 001, 010, 011, 100, 101, 110, 111\}$

Empty string identity for concatenation

$\epsilon \neq \emptyset$	$\{\epsilon\} \neq \emptyset$
$\overset{=}{\text{set}}$	$\overset{=}{\text{set}}$
$w \in \Sigma^*$	$L \subseteq \Sigma^*$

$$\epsilon \cdot w = w \cdot \epsilon = w$$

$$\{\epsilon\} \cdot L = L \cdot \{\epsilon\} = L$$

$$\emptyset \cdot L = L \cdot \emptyset = \emptyset$$
